NOTICES

This information was developed for products and services offered in the USA.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive, MD-NC119
Armonk, NY 10504-1785
United States of America

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

TRADEMARKS

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at www.ibm.com/legal/copytrade.shtml.

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.

Cell Broadband Engine is a trademark of Sony Computer Entertainment, Inc. in the United States, other countries, or both and is used under license therefrom.

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

IT Infrastructure Library is a Registered Trade Mark of AXELOS Limited.

ITIL is a Registered Trade Mark of AXELOS Limited.

Java and all Java-based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

Linear Tape-Open, LTO, the LTO Logo, Ultrium, and the Ultrium logo are trademarks of HP, IBM Corp. and Quantum in the U.S. and other countries.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

1 Introduction

In this lab we implement a Dashboard for the refund bot created in the Bot Design Lab.

The context of this lab is shown in the highlighted area below.

1.1 What is the difference between Dashboards and Reporting?

It is important to distinguish between RPA Dashboards and RPA Reporting. Outwardly they have similar functionality- to create charts from data. But they serve two distinct purposes. Reports are customer focused and Dashboards are administration focused. In other words, Reports are created from user data and viewed by customers. Dashboards are real time and viewed by administrators to find and resolve problems with running bots.

The IBM RPA Dashboard can read data from three sources:

- Jobs
- Counters
- Workflows and Processes

In this lab we will examine Counters. For a tutorial on all aspects of the Dashboard, see <https://learn.ibm.com/course/view.php?id=9051>

In this lab we use counters to graph the state of the Refunds bot.

1.2 Prerequisites

To run this lab, you will need to have the Refunds bot ready to run in your RPA Studio. See Bot Design - Lab Guide.

Scenario - Refund Report

We will create a dashboard to show the counters of the Refund bot.

1.3 Scenario Description

Jon is an RPA administrator responsible for monitoring the refund bot. At end of the day, he sends a pdf to his manager to indicate whether the bot has met its SLA (service level agreement). He exports a pie chart to show refunds in the following states:

- Backend Error
- BotError
- InvalidAmount
- InvalidPaymentType
- InvalidTicket
- Success

1.4 Start

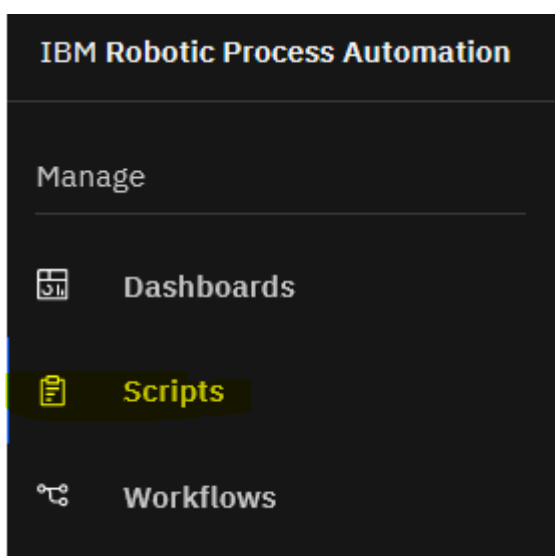

Open the Firefox Browser and navigate to the RPA tenant.

1.5 Log In

Login with your username and password. If you are using the SkyTap labs, it is *admin@ibm.com / passw0rd*

1.6 Enter Scripts Menu

Click *Scripts*:

1.7 Enter Projects Panel

Click the *Projects* tab within *Manage Scripts*, and select *Create Project*:

Enter *Refunds* as the name of the project, enter an optional description and then press *Create*

Create project

Project name

Refunds

Description

Project to contain counters for Customer Refunds Bot

Cancel Create

Still in the *Projects* tab, select *Counters* and then press *Create Counter*:

Create the six counters as shown below:

Manage scripts

Scripts Projects Parameters

Counters Updated 1 minute ago Create counter

Counter name	Modified	Modified by	Project name
BackendError	12/29/2021	Nigel Crowther	Refunds
BotError	12/29/2021	Nigel Crowther	Refunds
InvalidAmount	12/29/2021	Nigel Crowther	Refunds
InvalidPaymentType	12/29/2021	Nigel Crowther	Refunds
InvalidTicket	12/29/2021	Nigel Crowther	Refunds
Success	12/29/2021	Nigel Crowther	Refunds

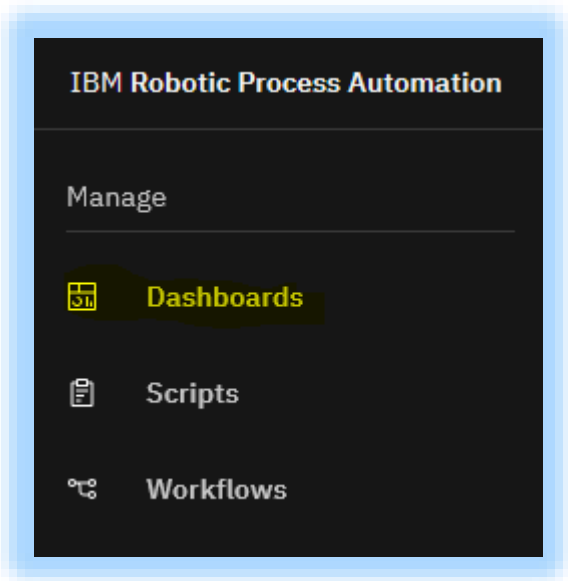

1.8 Run the Refunds bot

Run the *Refunds_Main_Complete_Counters.wal* that you implemented in the last lab in the Bot Design Lab. This should run without errors and increment the counters.

1.9 Enter Dashboard Menu

Back in the main menu, Click *Dashboards*:

1.10 Create a Refund Status Dashboard

In the Dashboards menu, create a new dashboard. Press *Edit in Designer* to edit it. Set the name of the dashboard to *Bot Status*.

In the report designer, click the *Pie* icon:

Click on the *Click here* link to bind the chart to a data source:

At the bottom of the data selection panel, set the data source to *Counters* and then press *OK*:

Now click on the *Click here* link again, this time to bind data:

Configure the chart data values. Set as follows:

The screenshot displays the IBM Analytics configuration interface. On the left, a sidebar contains sections for VALUES, ARGUMENTS, SERIES, HIDDEN DIMENSIONS, and HIDDEN MEASURES, each with an 'Add' button. The main panel is titled 'BINDING' and shows the configuration for 'CounterEventCreationDate'. It includes a search bar, a list of categories (Computers, Counter Events, Counters, Jobs, Projects, Schedules, Scripts), and a 'SUMMARY TYPE' section with 'Count' and 'Count Distinct' options. The 'Counter Events' category is expanded, showing 'Counter Event Creation Date' (highlighted in yellow), 'Counter Event Id' (101), and 'Counter Event Value' (25).

VALUES

Counter Event Creation D...

Add Value

ARGUMENTS

Add Argument

SERIES

Add Series

HIDDEN DIMENSIONS

Add Dimension

HIDDEN MEASURES

Add Measure

BINDING CounterEventCreationDate

+ Computers

- **Counter Events**

Counter Event Creation Date

Counter Event Id 101

Counter Event Value 25

+ Counters

+ Jobs

+ Projects

+ Schedules

+ Scripts

SUMMARY TYPE

Count Count Distinct

Next set the Arguments (or the name of the segments):

The screenshot shows the IBM Analytics interface. On the left, the 'VALUES' panel has a text input field containing 'Counter Event Creation Date (C...' and an 'Add Value' button. Below it, the 'ARGUMENTS' section has a yellow-highlighted 'Counter Name' argument and an 'Add Argument' button. Further down are 'SERIES', 'HIDDEN DIMENSIONS', and 'HIDDEN MEASURES' sections, each with an 'Add' button. On the right, the 'BINDING' panel shows a tree structure. The 'Counter Name' argument is highlighted in yellow under the 'Counters' category. The tree includes categories like 'Computers', 'Counter Events', 'Counters', 'Jobs', 'Projects', 'Schedules', and 'Scripts'. The 'Counter Events' category is expanded, showing 'Counter Event Creation Date', 'Counter Event Id', and 'Counter Event Value'.

Now add a Hidden Dimension *Counter Event Creation Date*. Ensure it is in *day-month-year* format:

The screenshot shows the IBM Analytics interface. On the left, the 'VALUES' panel has a text input field containing 'Counter Event Creation Date (C...' and an 'Add Value' button. Below it, the 'ARGUMENTS' section has a 'Counter Name' argument and an 'Add Argument' button. Further down are 'SERIES', 'HIDDEN DIMENSIONS', and 'HIDDEN MEASURES' sections, each with an 'Add' button. On the right, the 'BINDING' panel shows a tree structure. The 'Counter Event Creation Date' argument is highlighted in yellow under the 'Counter Events' category. The tree includes categories like 'Computers', 'Counter Events', 'Counters', 'Jobs', 'Projects', 'Schedules', and 'Scripts'. The 'Counter Events' category is expanded, showing 'Counter Event Creation Date', 'Counter Event Id', and 'Counter Event Value'. At the bottom, the 'GROUP INTERVAL' dropdown is set to 'Day-Month-Year'.

Examine the chart you created. You should see a pie chart like this:

1.11 Adding a date filter

The pie chart is set to show all counters since the beginning of time. We need to add a filter to make it display the counters from today only. Press the filter icon:

In the filter panel, click the pen icon and set the filter query. The Advanced Mode check box and create the following condition:

Filter Editor

And

Counter Event Creation Date (Year)

IsOutlookIntervalToday

IsOutlookIntervalToday([Counter Event Creation Date (Year)])

☒ Advanced Mode

Save

Cancel

Now the chart will display only counters incremented today.

Save Dashboard

Click on Viewer:

VIEWER

Press Save. The dashboard can be viewed by other users of the tenant.

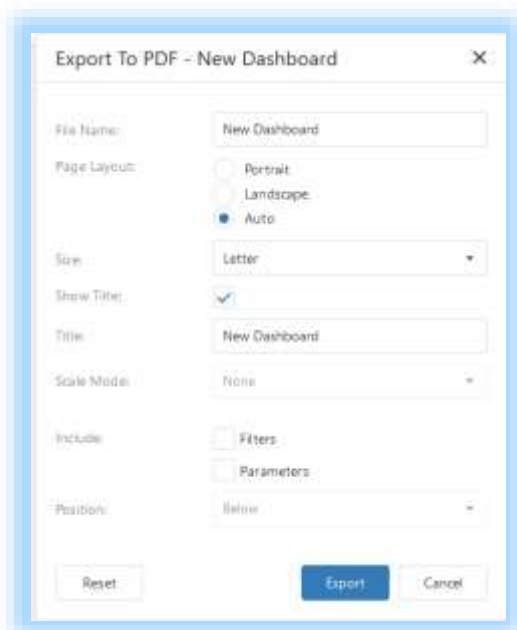

1.12 Export Dashboard to PDF

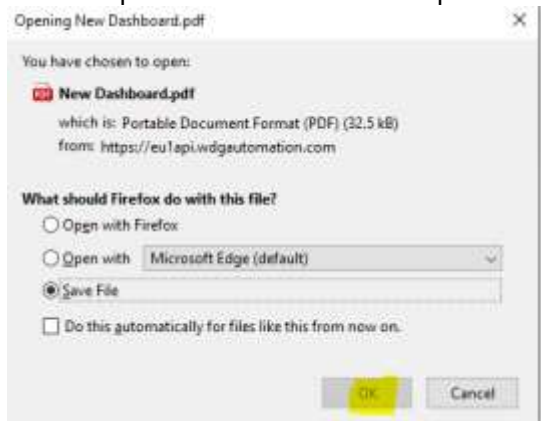

In view mode, click the  icon. This will give you three options to export the dashboard. Choose Pdf:

Select the default options:

Press Export. Set the *Save File* option and press *OK*.

The pdf is saved to your local drive where it can be shared with the business.

Nicely done! This concludes the lab.
